

Disclaimer:

As a condition to the use of this document and the information contained herein, the Facial Identification Scientific Working Group (FISWG) requests notification by e-mail before or contemporaneously to the introduction of this document, or any portion thereof, as a marked exhibit offered for or moved into evidence in any judicial, administrative, legislative, or adjudicatory hearing or other proceeding (including discovery proceedings) in the United States or any foreign country. Such notification shall include: 1) the formal name of the proceeding, including docket number or similar identifier; 2) the name and location of the body conducting the hearing or proceeding; and 3) the name, mailing address (if available) and contact information of the party offering or moving the document into evidence. Subsequent to the use of this document in a formal proceeding, it is requested that FISWG be notified as to its use and the outcome of the proceeding. Notifications should be sent to: chair@fiswg.org

Redistribution Policy:

FISWG grants permission for redistribution and use of all publicly posted documents created by FISWG, provided that the following conditions are met:

Redistributions of documents, or parts of documents, must retain the FISWG cover page containing the disclaimer.

Neither the name of FISWG, nor the names of its contributors, may be used to endorse or promote products derived from its documents.

Any reference or quote from a FISWG document must include the version number (or creation date) of the document and mention if the document is in a draft status.

Principles for Responsible Use of Facial Recognition Technology

1 1. Scope

2 1.1 The scope of this document is to provide a set of principles that FRS
3 administrators, developers, integrators, managers, and users can adopt, which will
4 help ensure that facial recognition technology is used in a consistent and responsible
5 manner.

6 1.2 These principles were written with the understanding that FISWG documents
7 are leveraged across the globe. As such, these principles are written in a way that
8 ensures that they can be adopted regardless of geographical location.

9 1.3 These principles are based on subject matter that is important to FISWG. As
10 such, these principles may not be all encompassing. Agencies are encouraged to
11 seek additional guiding documentation as needed.

12 2. Referenced Documents

13 2.1 Various FISWG documents, which can be found here:

14 <https://www.fiswg.org/documents.html>

15 3. Terminology

16 3.1 *Definitions:*

17 3.1.1 *agency*–Within this document, an agency will refer to the organization
18 responsible for the FRS.

19 3.1.2 *user*–Within this document, a user will utilize or support the FRS.

20 3.2 *Acronyms:*

21 3.2.1 *FRS-Facial Recognition System*

22 4. Purpose

23 4.1 This document details a set of principles to support agencies using facial
24 recognition technology in a consistent and responsible way.

25 4.2 The intended audience is:

- 26 • Agencies that are interested in facial recognition technology
- 27 • Facial recognition technology stakeholders, such as, but not limited to,
28 system owners, users, administrators, developers, and integrators

29 5. Significance and Use

30 5.1 FISWG creates documentation to support agencies in their development,
31 deployment, management, and use of facial recognition technology.

32 5.2 FISWG acknowledges that more supporting and guiding documentation is
33 needed to help agencies use the technology in a responsible manner.

34 5.3 This document is a summary of key principles that will help ensure that agencies
35 are using the technology in a responsible way.

36 5.4 This technology is critical for many use cases and is becoming more widespread
37 throughout the world. Adopting these principles will help ensure that the continued use
38 and expansion of this technology is well supported.

39 **6. Principles**

40 6.1 Policy

41 6.2 Facial recognition technology should be developed, deployed, managed, and
42 used in a way that respects relevant legislation, regulations, policies, and best practices.

43 6.3 Procedures

44 6.4 Agencies should develop detailed procedures that dictate how facial recognition
45 technology should be used, including acknowledgement of limitations. Procedures
46 should cover the end-to-end facial recognition process that is specific to the agency.

47 6.5 Standards Participation

48 6.6 Agencies should be encouraged to participate in international standards
49 development by joining groups such as FISWG. Participation in these types of groups

50 gives agencies a voice in the community and allows them to help shape documentation
51 that provides structure and consistency to the use of the technology.

52 6.7 Risks

53 6.8 Agencies should have a good understanding of the risks associated with
54 developing, deploying, managing, and using facial recognition technology. Agencies
55 should document, monitor, and manage risks on an ongoing basis. A risk management
56 strategy should include aligning with the principles found in this document.

57 6.9 Security

58 6.10 Images and biometric templates should be adequately protected during all
59 stages of the information life cycle: collection, use, disclosure, retention, storage, and
60 disposal. They should be treated with a high level of sensitivity, including appropriate
61 safeguards.

62 6.11 Training

63 6.12 Agencies that use facial recognition technology must ensure that system users
64 and administrators are well trained in their designated role.

65 6.13 Data Quality

66 6.14 Research demonstrates that data/image quality can impact the performance of
67 facial recognition technology. As such, agencies should be aware of the quality of their

68 data and should consider monitoring data/image quality on a regular basis to ensure
69 that system performance is maintained at an optimal level.

70 6.15 Testing

71 6.16 Agencies should have a thorough understanding of how their respective facial
72 recognition technology/systems perform in general and across demographics that are
73 specific to the agency. Testing should include assessment of system robustness to
74 threats that can compromise integrity. Agencies should reference NIST testing results
75 as benchmark and conduct testing on operationally relevant data through their vendor
76 or in-house research teams.

77 6.17 Access

78 6.18 Agencies should ensure that facial recognition system access is only granted to
79 individuals with adequate security clearance, in line with regional or agency-specific
80 security best practices. Access should be monitored and updated on a regular basis,
81 and individuals should only have access to the system functionality relevant to their
82 roles.

83 6.19 Transparency

84 6.20 Where permitted by agency policy, agencies should strive to be open and
85 transparent about their use of facial recognition technology. This should include
86 releasing information on how the agency uses the technology and how the agency

87 aligns with relevant legislation, regulations, policies, and procedures – including the
88 principles specified in this document.
