

268 6.6.2 An operational workflow for investigative facial searching should be
269 considered:

270 6.6.2.1 System: A facial image is received and is to be searched

271 6.6.2.2 Human: The image may be processed by a human practitioner before the
272 search

273 6.6.2.3 System: The image is searched and a candidate list returned

274 6.6.2.4 Human: The candidate list is reviewed

275 6.6.2.5 Human: Potential candidates may be located

276 6.6.2.6 Human: The search results are finalized and an investigative lead may result

277 6.6.3 If any of these sequential steps are minimized, the overall impact to the entire
278 process will be affected.
