

## **Disclaimer:**

As a condition to the use of this document and the information contained herein, the Facial Identification Scientific Working Group (FISWG) requests notification by e-mail before or contemporaneously to the introduction of this document, or any portion thereof, as a marked exhibit offered for or moved into evidence in any judicial, administrative, legislative, or adjudicatory hearing or other proceeding (including discovery proceedings) in the United States or any foreign country. Such notification shall include: 1) the formal name of the proceeding, including docket number or similar identifier; 2) the name and location of the body conducting the hearing or proceeding; and 3) the name, mailing address (if available) and contact information of the party offering or moving the document into evidence. Subsequent to the use of this document in a formal proceeding, it is requested that FISWG be notified as to its use and the outcome of the proceeding. Notifications should be sent to: [chair@fiswg.org](mailto:chair@fiswg.org)

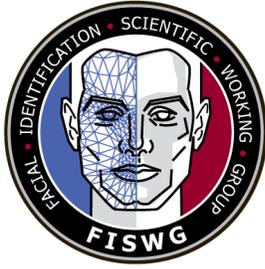

## **Redistribution Policy:**

FISWG grants permission for redistribution and use of all publicly posted documents created by FISWG, provided that the following conditions are met:

Redistributions of documents, or parts of documents, must retain the FISWG cover page containing the disclaimer.

Neither the name of FISWG, nor the names of its contributors, may be used to endorse or promote products derived from its documents.

Any reference or quote from a FISWG document must include the version number (or creation date) of the document and mention if the document is in a draft status.

# Facial Recognition Systems Operation Assurance: Preserving Image Quality in Desktop Documents

## 1 Introduction

1.1 When inserting facial images into desktop documents the processes in this FISWG document present:

1.1.1 How to adjust Microsoft Office Word 2016 (.docx) to maximize image quality when inserting facial images. These adjustments also apply to Excel and PowerPoint (.xlsx and .pptx).

1.1.2 If Word 2016 is properly adjusted before inserting images, the images extracted are the same images as inserted into Word, thus preserving image quality as proven by the identical SHA1 checksums.

1.1.3 This process should work with any image format inserted into Office 2016 (e.g., bmp, png, etc.) but agencies who utilize this technique should verify the process works as intended with their own images before deploying this as a standard operating procedure.

## 2. Scope

2.1 This document provides a detailed process with examples for maintaining image quality when storing facial images using Microsoft Office applications. If these processes are not followed, the quality of these images will be compromised when/if

18 enrolled or searched in Facial Recognition Systems (FRS) or used for one-to-one  
19 comparisons.

20 2.2 This document applies to Microsoft Word (.docx), Excel (.xlsx) and PowerPoint  
21 (.pptx) in Microsoft Office version 2016 ONLY. Different processes may be required for  
22 other versions of Microsoft Office.

23 2.3 This document provides guidelines and techniques to ensure image quality is  
24 maintained when facial images are inserted into desktop documents for storage or  
25 submitting to agencies for enrolling or searching with facial recognition systems or for  
26 one-to-one comparisons.

27 2.4 The intended audience of this document is system owners, system users, and  
28 system administrators of existing facial recognition systems and Facial Image  
29 Comparison examiners.

### 30 **3. Referenced Documents**

#### 31 3.1 *ASTM Standards:*

32 E2916 Terminology for Digital and Multimedia Evidence Examination<sup>1</sup>

#### 33 3.2 *Other Documents:*

34 Microsoft Office file formats<sup>2</sup>

---

<sup>1</sup> For referenced ASTM standards, visit the ASTM website, [www.astm.org](http://www.astm.org), or contact ASTM Customer Service at [service@astm.org](mailto:service@astm.org). For Annual Book of ASTM Standards volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>2</sup> Microsoft technical documentation, including file formats, is available from <https://docs.microsoft.com/en-us/#office> or <https://microsoft.com>.

35 NIST Multiple Encounter Dataset (MEDS)<sup>3</sup>

## 36 4. Terminology

37 4.1 *Definitions*: See ASTM E2916 Terminology for Digital and Multimedia  
38 Evidence Examination terms.

39 4.2 *Acronyms*:

40 4.2.1 *FR*: face recognition

41 4.2.2 *FRS*: facial recognition systems

42 4.2.3 *IPD*: Interpupillary distance

43 4.2.4 *BMP*: bitmap

44 4.2.5 *PNG*: portable network graphics

45 4.2.6 *NIST*: National Institute of Standards and Technology

46 4.2.7 *FRVT*: Facial Recognition Vendor Tests

## 47 5. Image Transfer Best Practice

48 5.1 When any imagery is transferred between agencies, it is always best practice to  
49 exchange an exact (bit for bit) copy of the original image for any forensic purpose. The  
50 copy should be made with a conventional copy command using the operating system's  
51 intrinsic commands. A copy should never be made by opening the image in an image  
52 editor to save a new copy of the image, or a screen capture or printing to rescan  
53 images. These practices risk corruption or degradation of the original imagery.

---

<sup>3</sup> Available from National Institute of Standards and Technology (NIST) website  
<https://www.nist.gov/itl/iad/image-group/special-database-32-multiple-encounter-dataset-meds> or  
<http://www.nist.gov>.

54 5.2 Once exact copies are made so the originating agency can keep the verified  
55 original images, it is then always best practice to use lossless compression software that  
56 can package, transport, and extract the imagery to the destination agency. There are  
57 many software packages that can be used to do this which include but are not limited to  
58 the following:

- 59 • Winzip: <https://www.winzip.com/>
- 60 • 7Zip: <https://www.7-zip.org/>
- 61 • Gzip: <https://www.gzip.org/>
- 62 • WinRAR: <https://www.win-rar.com>

63 5.3 Lossless data compression is the key feature to ensure with these software  
64 applications. Some packages may also offer encryption, but this function is not covered  
65 in this document.

## 66 **6. Procedure**

67 6.1 This document covers the following areas:

68 6.1.1 How to modify Microsoft Office components (e.g., Word, Excel, PowerPoint) to  
69 preserve maximum image quality when inserting facial imagery.

70 6.1.2 Examples of how image quality is reduced when Microsoft Office is not setup to  
71 maximize image quality.

## 72 **6.2 Data Set**

73 6.2.1 Facial imagery from the NIST Special Database 32 (SD 32) Multiple Encounter  
74 Dataset (MEDS) was used in this document.

75 6.2.2 NIST SD 32 MEDS is a test corpus organized from an extract of submissions of  
76 deceased persons with prior multiple encounters. MEDS is provided to assist the FBI  
77 and partner organizations refine tools, techniques, and procedures for face recognition  
78 as it supports Next Generation Identification (NGI), forensic comparison, training, and  
79 analysis, and face image conformance and inter-agency exchange standards. The  
80 MITRE Corporation (MITRE) prepared MEDS in the FBI Data Analysis Support  
81 Laboratory (DASL) with support from the FBI Biometric Center of Excellence.

82 6.2.3 Acknowledgement: NIST SD 32 MEDS is being released (as prepared by  
83 MITRE Corporation) to support the NIST Multiple-Biometric Evaluation 2010 (MBE). In  
84 addition, this dataset is available to any user interested in biometric research. The  
85 sponsor of this joint effort and provider of the data is the Federal Bureau of Investigation  
86 (FBI).

87 6.2.4 Ten images from MEDS were randomly selected based on image size; see  
88 Figure 1. For facial images used, issues such as lighting or pose were not considered.

The screenshot shows a file explorer window titled 'Python > FISWG\_MediaExtraction > Images'. It displays 12 portrait photographs of three men. The first man (ID S284) is shown in a front view and a profile view. The second man (ID S303) is shown in a front view. The third man (ID S435) is shown in a front view. The fourth man (ID S514) is shown in a front view and a profile view. The fifth man (ID S518-01) is shown in a front view and a profile view. The sixth man (ID S518-02) is shown in a front view and a profile view. Below the images is a table with the following data:

Name	Date	Type	Size	Dimensions	Height	Width
S514-01-t10_01.jpg	4/1/2021 1:02 PM	JPG File	459 KB	3008 x 2000	2000 pixels	3008 pixels
S514-01-t10_02.jpg	4/1/2021 1:02 PM	JPG File	449 KB	3008 x 2000	2000 pixels	3008 pixels
S284-02-t10_01.jpg	4/1/2021 1:02 PM	JPG File	157 KB	768 x 960	960 pixels	768 pixels
S284-02-t10_02.jpg	4/1/2021 1:02 PM	JPG File	149 KB	768 x 960	960 pixels	768 pixels
S518-02-t10_02.jpg	4/1/2021 1:02 PM	JPG File	100 KB	768 x 960	960 pixels	768 pixels
S518-01-t10_02.jpg	4/1/2021 1:02 PM	JPG File	100 KB	768 x 960	960 pixels	768 pixels
S303-01-t10_01.jpg	4/1/2021 1:02 PM	JPG File	98 KB	768 x 960	960 pixels	768 pixels
S435-01-t10_01.jpg	4/1/2021 1:02 PM	JPG File	98 KB	768 x 960	960 pixels	768 pixels
S518-01-t10_01.jpg	4/1/2021 1:02 PM	JPG File	98 KB	768 x 960	960 pixels	768 pixels
S518-02-t10_01.jpg	4/1/2021 1:02 PM	JPG File	97 KB	768 x 960	960 pixels	768 pixels

89

Figure 1: MEDS Data Used

90 6.3 If copies of original imagery cannot be obtained and the only copy available is in a  
91 desktop document, then the processes for inserting and extracting the images from the  
92 internal data structures of desktop documents as described in this guideline can be  
93 used. For the cases defined and tested in this document, the process retrieves a copy of  
94 the pixels of the image as they were originally inserted into the desktop document.

95 6.4 Depending on how the images were originally inserted into the document, these  
96 pixels may, or may not, be an accurate representation of the original images. The  
97 processes described below explain how to maximize the likelihood that the pixels in the  
98 desktop document are an accurate copy of the original images – at the expense of  
99 making the desktop document larger than it would be with the typical default settings of  
100 the desktop programs.

101 6.5 Caveats and exceptions in this process include but are not limited to the following:

102 6.5.1 Defaults settings and internal processes of desktop applications can change at  
103 any time, without notification or warning by the application vendors (e.g., open source or  
104 Microsoft Office). This could break the processes in this document.

105 6.5.2 The insert and extraction process defined in this document have not been  
106 tested on all variants of image formats, image resolutions, and other associated image  
107 parameters. It may break without notification or warning for cases that have not been  
108 tested.

109 6.6 These desktop applications may convert an image from its original format into  
110 another image format within the office document, even if the pixel values are preserved.

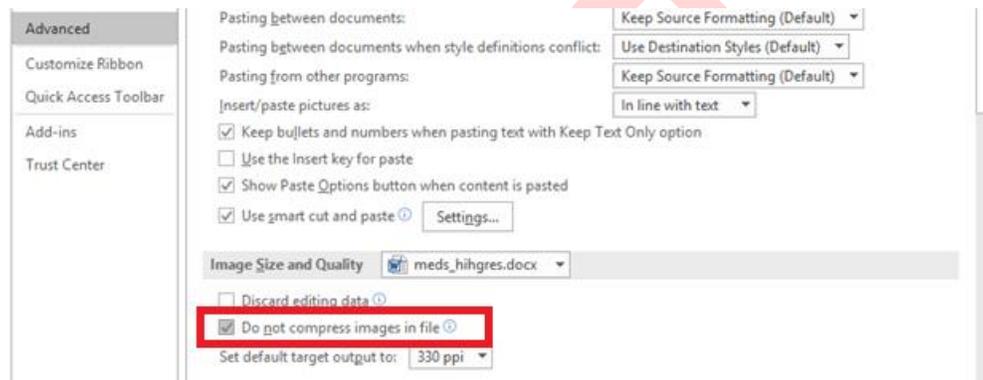

## 111 6.7 Image Insertion Process – Word

112 6.7.1 Open Word from Microsoft Office 2016.

113 6.7.2 Select Home→Options→Advanced.

114 6.7.3 Locate “Image Size and Quality.”

115 6.7.4 Select “Do not compress images in file” (see Figure 2).

116

117 **Figure 2: Image Size and Quality settings – Word**

118 6.7.5 Insert the images into the document using the Copy and Paste function and  
 119 save the document to disk.

120 6.7.6 The user will see that final file size of the .docx will be larger since the facial  
 121 images will not be compressed.

122 6.7.7 Table 1 provides a comparison of Word document files sizes for different levels  
 123 of image compression.

File	File size on disk

Raw images not inserted into the document	1,728 KB
Docx: No compression	1,815 KB
Docx: 300 PPI	1,814 KB

124

**Table 1: Document file size comparison – Word**

125

6.7.8 Table 2 provides an example of a single image inserted and extracted.

File	File size	Rows	Columns	Channels	Resolution	Format	SHA1
Original file inserted	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Docx: No compression document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Docx: 300 ppi resolution document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759

126

**Table 2: Image insertion and extraction example – Word**

127

## 6.8 Image Insertion Process – Excel

128

6.8.1 Open Excel from Microsoft Office 2016.

129

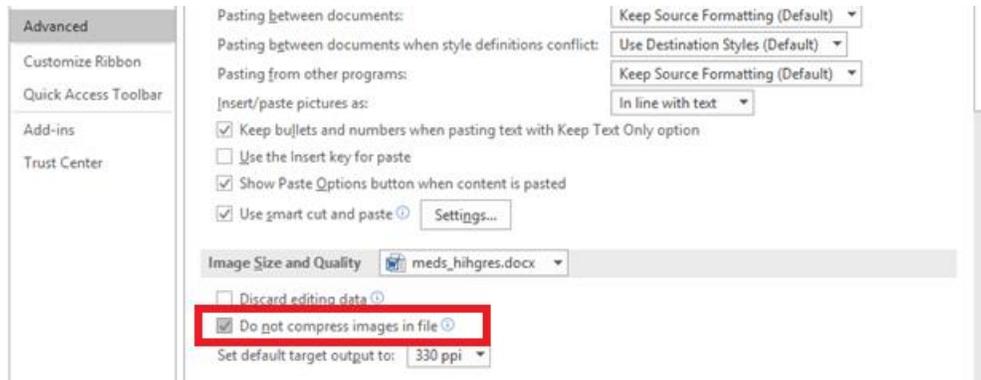

6.8.2 Select Home→Options→Advanced.

130

6.8.3 Locate “Image Size and Quality.”

131

6.8.4 Select “Do not compress images in file” (see Figure 3).

132

133

**Figure 3: Image Size and Quality settings – Excel**

134 6.8.5 Insert the images into the document using the Copy and Paste function and  
 135 save the document to disk.

136 6.8.6 The user will see that final file size of the .xlsx will be larger since the facial  
 137 images will not be compressed.

138 6.8.7 Table 3 provides a comparison of Excel document files sizes.

File	File size on disk
Raw images not inserted into the document	
Xlsx: No compression	
Xlsx: 300 ppi	

139

**Table 3: Document file size comparison – Excel**

140 6.8.8 Table 4 provides an example of a single image inserted and extracted.

141

<b>File</b>	<b>File size</b>	<b>Rows</b>	<b>Columns</b>	<b>Channels</b>	<b>Resolution</b>	<b>Format</b>	<b>SHA1</b>
Original file inserted	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Docx: No compression document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Docx: 300 ppi resolution document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759

142 **Table 4: Image insertion and extraction example – Excel**

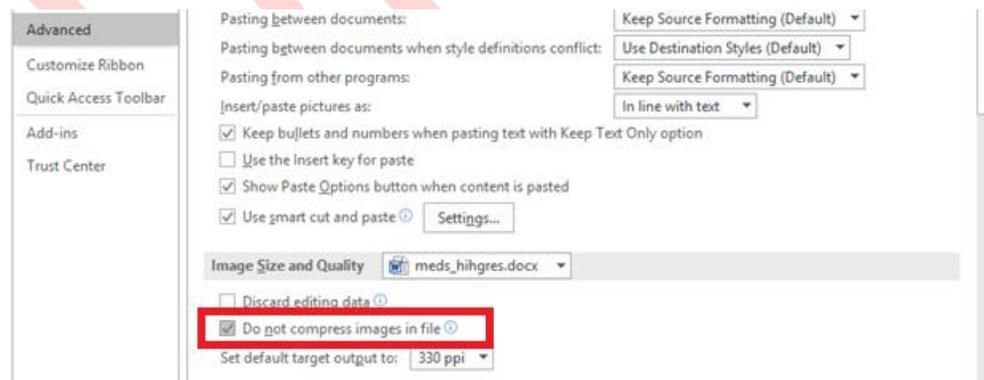

143 **6.9 Image Insertion Process – PowerPoint**

144 **6.9.1 Open PowerPoint from Microsoft Office 2016.**

145 **6.9.2 Select Home→Options→Advanced.**

146 **6.9.3 Locate “Image Size and Quality.”**

147 **6.9.4 Select “Do not compress images in file” (see Figure 4).**

148

149

**Figure 4: Image Size and Quality settings – PowerPoint**

150 6.9.5 Insert the images into the document using the Copy and Paste function and  
 151 save the document to disk.

152 6.9.6 The user will see that final file size of the .pptx will be larger since the facial  
 153 images will not be compressed.

154 6.9.7 Table 5 provides a comparison of PowerPoint document files sizes.

File	File size on disk
Raw images not inserted into the document	
Xlsx: No compression	
Xlsx: 300 ppi	

155 **Table 5: Document file size comparison – PowerPoint**

156 6.9.8 Table 6 provides an example of a single image inserted and extracted.

157

File	File size	Rows	Columns	Channels	Resolution	Format	SHA1
Original file inserted	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Pptx: No compression document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759
Pptx: 300 ppi resolution document	469949	2000	3008	3	(300x300)	RGB	6CDAEDACA97FFF66F F6D3EC75CDA1BBB17 40B759

158 **Table 6: Image insertion and extraction example – PowerPoint**

159 6.10 Observations

160 6.10.1 The original image was extracted from the “No Compression” and 300 ppi  
 161 documents as evidenced by the identical SHA1 checksum (yellow highlight); see Table  
 162 2, Table 4, and Table 6.

163 6.10.2 As the image quality resolution is reduced from “No Compression” to 96 ppi  
 164 the inserted image file is reduced in size with a corresponding reduction in image  
 165 quality; see Figure 5.

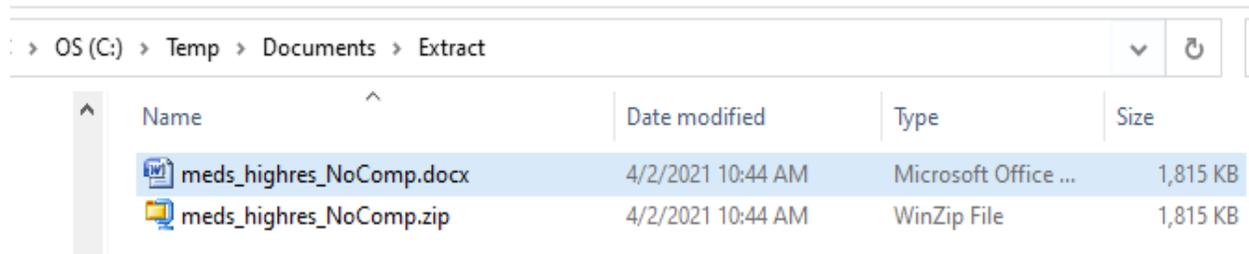

**Figure 5: Image quality reduction corresponding to image compression**

166

## 167 6.11 Image Extraction Process

168 6.11.1 Copy the document to a temporary directory.

169 6.11.2 Rename the file to .zip; see Figure 6.

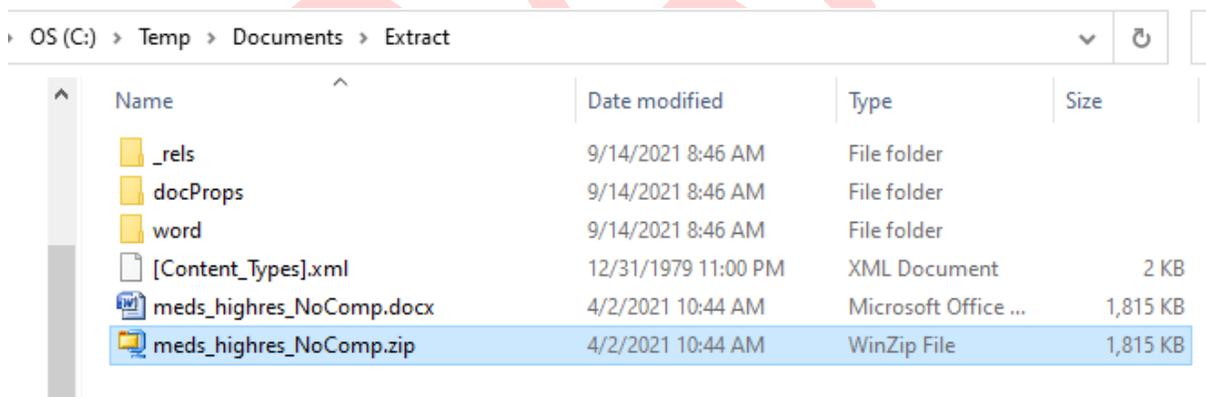

170

171 **Figure 6: Before and after copying and renaming a file**

172 6.11.3 Extract the zip file to disk using any 'unzipping' software on your system; see

173 Figure 7.

174

175 **Figure 7: Directory after unzipping a file**

176 6.11.4 Go to the "word\media" directory to see the images; see Figure 8 and Figure

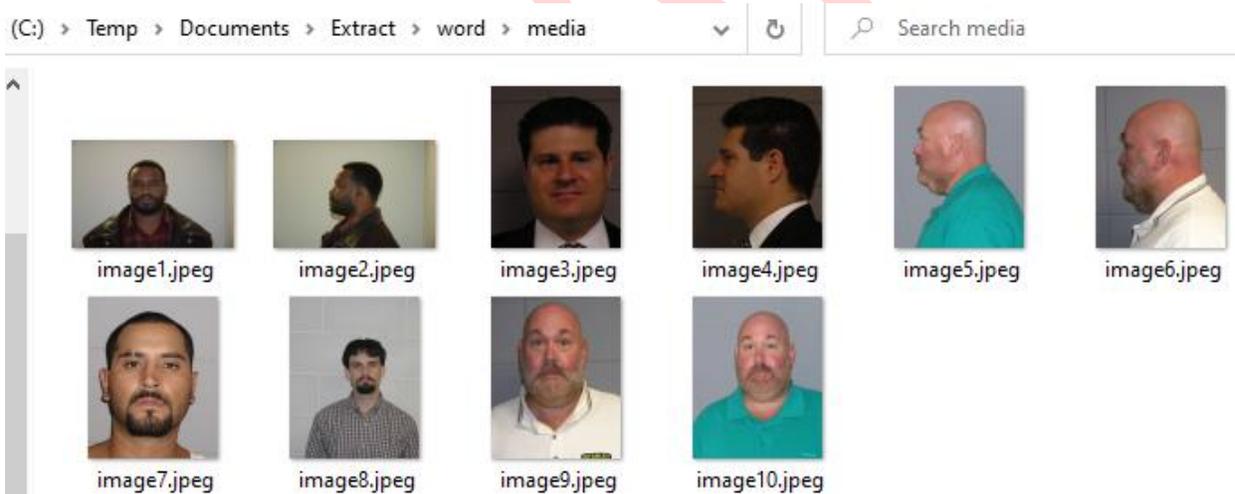

177 9.

Name	Date	Type	Size
image1.jpeg	12/31/1979 11:00 PM	JPEG File	459 KB
image2.jpeg	12/31/1979 11:00 PM	JPEG File	449 KB
image3.jpeg	12/31/1979 11:00 PM	JPEG File	157 KB
image4.jpeg	12/31/1979 11:00 PM	JPEG File	149 KB
